

Community Edition

Required:
32GB RAM and 8 VCPU's of power.

Version 4.0

FULLY LOADED

SIEMonster is a collection of the best open-source security tools and our development as professional hackers to provide a *SIEM for everyone*. We showcase the latest and greatest tools for security professionals, and our Community Edition v.4 Fully Loaded has it all.

It is designed for smaller organizations, charities, classrooms, or even those who just want to check out our Fully Loaded SIEM. This edition is completely free for the Community and to be supported by the Community.

Community Edition gives you the ability to monitor all network assets in an affordable, scalable solution. This single server solution makes it easier for organizations that only have 1-100 endpoints.

To access the Community Edition, you will need to sign up to the Community Portal, which is available via the download button on our website. There you will also find all the resources you will need to help install and learn about SIEMonster.

We have created an admin guide and videos for you.

You are encouraged to interact with other Community Edition users for support. You can share how you are using the SIEM, and even help out another user, after all, that's what Community is all about.

Runs on

- VMware ESXi
- VMware Professional
- Vbox
- BareMetal
