

Enterprise Edition

Version 4.0

FULLY LOADED

The SIEMonster Enterprise Edition provides large organizations the ability to monitor all their network assets in an affordable and scalable solution.

We built this because our customers asked for it. They were repeatedly telling us about the quotes of over \$1 million for other SIEM providers and were forced to limit the number of endpoints they covered due to costs, as hackers this was unthinkable to us.

We don't want you to be penalized by the number of assets you need to monitor. We want you to cover them all, and when say all, we mean all, endpoints, IoT, SCADA, and all sensors.

So we created SIEMonster Enterprise as a single price model regardless of data or endpoints. That wasn't enough for us though, we built the platform on K8S with managed ingestion and can reach 500K EPS (events per second) in our cloud offering.

How do you like them apples now?

SIEMonster is a collection of the best open-source security tools, as well as our own, to provide a SIEM for everyone.

We showcase the latest and greatest tools for security professionals.

We have customers all around the world now using our product that was once using Gartner quadrant competitors.

Don't believe us? Ask for one of our case studies.

Runs on

- Amazon AWS
- VMware ESXi
- BareMetal
