

Professional Edition

Version 4.0

FULLY LOADED

The SIEMonster Professional Edition provides smaller organizations with the ability to monitor their network assets in an affordable and scalable solution. This single server solution is designed for companies that only have 1-200 endpoints.

Professional edition is built because our Enterprise Edition, with its multi-servers, is too large and cumbersome for smaller businesses.

We believe that everyone deserves a secure network, including smaller organizations. After all, small doesn't mean less important. A SIEM for everyone.

Professional Edition may be smaller, but it's still packed with all the features from SIEMonster Enterprise and comes as a single price model.

SIEMonster is a collection of the best open-source security tools, as well as our own, to provide a SIEM for everyone.

We showcase the latest and greatest tools for security professionals.

We have customers all around the now using our product that was once using Gartner quadrant competitors.

Don't believe us? Ask for one of our case studies.

Runs on

- Amazon AWS
- VMware ESXi
- BareMetal
